Section I: Anatomy and Physiology of the Nervous System	1		
1. Cells of the CNS and How They Communicate	3		
<i>Colm Treacy</i>			
Introduction	3		
Components of the neurone and their functions	3		
Neuroglia	8		
Communication by neurones	8		
Neurotransmission	13		
Summary	17		
References	17		
2. The Structural and Biochemical Defences of the CNS	18		
<i>Ehsan Khan</i>			
Introduction	18		
Bony encasement	18		
The meninges and cerebrospinal fluid (CSF)	25		
Blood supply to the CNS	28		
The blood-brain barrier (BBB)	31		
Summary	32		
References	32		
3. The Anatomy and Physiology of the Brain	34		
<i>Chris Eberhardie, Sue Woodward and Ann-Marie Mestecky</i>			
Introduction	34		
Describing anatomical structures	34		
Foetal development of the brain	34		
The gross anatomy of the brain	34		
Cerebrum	34		
Frontal lobe	37		
Parietal lobe	40		
Temporal lobe	41		
Occipital lobe	42		
Limbic system	42		
Amygdala	43		
Hippocampus and memory	43		
Mamillary bodies	43		
Septum pellucidum	43		
Cingulate gyrus, insula and parahippocampal gyrus	43		
Cerebellum	44		
Basal ganglia and the thalamus	45		
The hypothalamus	47		
Brain stem	51		
Reticular formation and reticular activating system	52		
Summary	53		
References	53		

Contents

4. The Spinal Cord	54	Summary	104
<i>Maureen Coggrave</i>		References	104
Introduction	54		
Gross anatomy	54		
Physiology	59		
Summary	66		
Suggested reading	66		
5. The Autonomic Nervous System	67	8. Assessment, Interpretation and Management of Altered Consciousness	107
<i>Chris Brunker</i>		<i>Neal Cook and Sue Woodward</i>	
Introduction	67	Introduction	107
Anatomy	67	Consciousness	107
Neurotransmitters and receptors	74	Sleep	107
The sensory component	76	Assessment of consciousness	107
The enteric nervous system	76	Interpretation of GCS findings	112
Visceral pain	77	Altered states of consciousness	112
The function of the autonomic nervous system	77	Brain stem death	114
The hypothalamus	77	Nursing management of a patient with altered consciousness	115
The autonomic nervous system, emotion and the conscious brain	77	Nursing management of a patient with brain stem death	118
Summary	78	Summary	119
Suggested reading	78	References	119
6. Intracranial Physiology	79	9. Assessment, Interpretation and Management of Impaired Cognition	123
<i>Ann-Marie Mestecky</i>		<i>Thom Aird</i>	
Introduction	79	Introduction	123
Intracranial pressure	79	Physiology of cognition	123
Cerebral blood flow (CBF)	80	Pathophysiology and altered cognition	124
Oxygen and glucose requirements	82	Aetiology and presentation of delirium	129
Summary	83	Assessing patients with impaired cognition	130
References	83	Interpretation of assessment findings	134
		Nursing management of delirium	136
		Multidisciplinary teamworking	137
		Post-delirium counselling	138
		Summary	138
		References	138
Section II: Assessment, Interpretation and Management of Specific Problems in the Neurological Patient	85	10. Assessment and Management of Challenging Behaviour	141
7. Assessment and Management of Raised Intracranial Pressure	87	<i>Mary Braine</i>	
<i>Ann-Marie Mestecky</i>		Introduction	141
Introduction	87	Pathophysiology	142
Causes of raised ICP	87	Epidemiology	142
Signs and symptoms	88	Assessment	143
Investigations	91	Management	145
Assessment	91	Environmental and behavioural management strategies	145
Treatment of raised ICP	96	Staff interactions and behaviours	146
General measures and nursing care for patients with raised ICP or suspected raised ICP	98	Pharmacological management	147
First line measures to reduce ICP	100	Physical restraint	149
		Summary	151
		References	152

11. Assessment, Interpretation and Management of Altered Perceptual, Motor and Sensory Function	155	Medical and nursing management of common cranial nerve disorders	206
<i>Iain Bowie and Sue Woodward</i>		Summary	206
Introduction	155	References	207
Sensation	155	14. Assessment, Interpretation and Management of Altered Cardiovascular Status in the Neurological Patient	209
Sensory assessment	156	<i>Chris Brunker</i>	
Sensory impairment	158	Introduction	209
Physiology of movement	160	Haemodynamics	209
Assessment of movement	161	Autonomic control of haemodynamics	210
Abnormal movements and movement disorders	165	Haemodynamic assessment	210
Spasticity, rigidity and contracture	167	Temperature	212
Nursing care of the patient with motor impairment	169	Haemodynamic effects of nervous system disease	213
Specific nursing management of spasticity	170	Brain stem death	217
Specific nursing management of flaccidity	173	Autonomic effects of peripheral nerve disease	218
Summary	173	Temperature abnormalities and nervous system disease	218
References	174	Summary	220
12. Assessment, Interpretation and Management of Altered Speech and Swallowing	176	References	220
<i>Jane Dundas and Kathryn Chappell</i>		15. Assessment, Interpretation and Management of Impaired Respiratory Function in the Neurological Patient	225
Introduction	176	<i>Anne Mcleod and Ann-Marie Mestecky</i>	
Overview of altered speech	176	Introduction	225
The assessment and interpretation of communication	178	Physiology	225
Assessment of communication	179	Assessment of respiratory function	232
Nursing management of altered communication	180	Monitoring and investigation of respiratory function	234
Medical management related to altered communication	182	Acid–base balance	235
Overview of altered swallowing (dysphagia)	182	Disturbances of acid–base balance	236
Aetiology of neurogenic dysphagia	183	Nursing care/management	237
Assessment of dysphagia	184	Respiratory support	240
Nursing management of dysphagia	188	Non-invasive respiratory support	242
Summary	191	Suctioning	246
References	192	Assisted cough	248
13. Assessment, Interpretation and Management of Cranial Nerve Dysfunction	194	Summary	248
<i>Iain Bowie and Sue Woodward</i>		References	248
Introduction	194	16. Assessment and Management of Fluid, Electrolytes and Nutrition in the Neurological Patient	250
Functions of the cranial nerves	194	<i>Neal Cook</i>	
Testing cranial nerves and interpreting findings	197	Introduction	250
Cranial nerve disorders	202	Physiology of fluid and electrolyte balance	250

Final assessment in the neuroscience patient	253	Section III: Neurological Investigations and Neurosurgical Procedures	301
Final management	256		
Management of common causes of hyponatraemia in the neurological patient	257	19. Neurological Investigations	303
Management of common causes of hypernatraemia in the neurological patient	259	<i>Jane Connor and Kirsty Andrews</i>	
Naemia in the neuroscience patient	260	Introduction	303
Biochemical and physical assessment	260	Structural neuroimaging: cranial structures	303
Mechanisms of nutritional support	261	Structural neuroimaging: spinal structures	306
Summary	266	Functional neuroimaging	307
References	266	Neurophysiology	308
		Biopsies	309
		Lumbar puncture (LP)	310
		Summary	311
		References	311
17. Assessment and Management of Pain	268	20. Common Neurosurgical Procedures	312
<i>Sue Woodward</i>		<i>Anne Preece</i>	
Introduction	268	Introduction	312
Defining pain	268	General pre-operative nursing management	312
Physiology of pain	268	Immediate pre-operative preparation	312
Somatic and visceral pain	268	Overview of surgical procedures	314
Neuropathic pain	271	Post-operative nursing management for all neurosurgical patients	320
Assessment of pain	271	Specific post-operative neurosurgical nursing care	324
Headache	274	Summary	325
Medical and nursing management of pain	276	References	325
Management of headache	276		
Management of neuropathic, somatic and visceral pain	278	Section IV: Management of Patients with Intracranial Disorders and Disease	329
Summary	279		
References	279	21. Management of Patients with Intracranial Tumours	331
18. Assessment and Management of Bladder and Bowel Problems		<i>Emma Townsley</i>	
<i>Mandy Wells, Deborah Yarde and Sue Woodward</i>		Introduction	331
Introduction	283	Epidemiology	331
Physiology of micturition	283	Pathophysiology	331
Urinary symptoms and incontinence	284	Aetiology	332
Neurological conditions and bladder dysfunction	285	Overview of tumour types and classification	332
Assessment of bladder function	285	Common types of tumour: glioma, meningioma and metastases	333
Medical and nursing management of urinary incontinence	288	Clinical signs and symptoms	334
Physiology of defecation	292	Diagnosis	335
Neurological conditions and bowel disorders	292	Treatment	335
Assessing bowel function	293	Specific treatment for each type of tumour	339
Bowel management programmes	294	Less common types of tumour	341
Summary	296	Pituitary tumours	341
References	296		

Functioning pituitary tumours	342	Diagnosis	381
Non-functioning pituitary tumours	343	Nursing and medical management of the patient with an aneurysmal SAH	382
Rare tumours involving the pituitary gland	344	Extracranial complications associated with SAH	386
Vestibular Schwannoma – acoustic neuroma	344	Treatment of the aneurysm	387
Rare tumours: incidence of less than 1–2 per million per year	345	Specific nursing management to monitor/treat for post-coiling complications	388
Service guidance for the management of patients with brain tumours	345	Prognostic factors	389
Nursing care and management	345	Outcomes	389
Care of the patient undergoing radiotherapy	349	Arteriovenous malformations	390
Care of the patient undergoing chemotherapy	352	Incidence	390
Care of the patient undergoing steroid therapy	352	Aetiology	390
Summary	354	Presentation signs and symptoms	390
References	354	Treatment	391
		Nursing management	391
		Outcomes	391
		Other vascular malformations	392
		Summary	393
		References	394
22. Management of Patients with Stroke and Transient Ischaemic Attack	357	24. Management of Patients with Central Nervous System Infections	396
<i>Jane Dundas, Beverley Bennett and Julia Slark</i>		<i>Ava Easton, Stephen Pewter, Huw Williams, Leann Johnson, Ed Wilkins and Ann-Marie Mestecky</i>	
Introduction	357	Acute bacterial meningitis	396
Definitions	357	Aetiology and epidemiology	396
Epidemiology	357	Pathophysiology	397
Aetiology	358	Clinical signs and symptoms	397
Risk factors	359	Diagnosis	398
Pathophysiology	360	Medical management and treatment	398
Clinical signs and symptoms of stroke	361	Nursing management	398
Diagnosis	361	Transmission	400
Medical management of stroke and TIA	364	Prognosis	400
Surgical management of stroke and TIA	365	Physical, cognitive and psychosocial impairments following meningitis	400
Evidence-based nursing management	365	Support	400
Stroke rehabilitation	367	Subacute meningitis	400
Summary	374	Encephalitis	401
References	375	Epidemiology and aetiology	401
		Pathophysiology	402
		Clinical signs and symptoms	402
		Diagnosis	402
		Medical management	402
		Nursing management	403
		Prognosis	403
		Physical, cognitive and psychosocial impairments following encephalitis	403
23. Management of Patients with Intracranial Aneurysms and Vascular Malformations	379		
<i>Ann-Marie Mestecky</i>			
Introduction	379		
Aneurysms	379		
Incidence of aneurysms	379		
Aetiology of aneurysms	379		
Other causes of spontaneous subarachnoid haemorrhage (SAH)	380		
Signs and symptoms of aneurysmal SAH	381		

Contents

Further information	406	Medical management	431
Cerebral abscess	406	Nursing management	433
Aetiology and epidemiology	406	Parkinson plus disorders	440
Pathophysiology	406	Dystonia	442
Clinical signs and symptoms	406	Epidemiology	442
Diagnosis and medical management	406	Aetiology	442
Nursing management	406	Pathophysiology	443
Prognosis	406	Signs and symptoms	443
Neurological complications of human immunodeficiency virus (HIV)	406	Diagnosis	443
Epidemiology of HIV	406	Medical management	443
Pathophysiology	407	Nursing management	444
Clinical signs and symptoms	407	Huntington's disease (HD)	447
Diagnosis and investigations	408	Epidemiology	447
Medical management and drugs	409	Aetiology	447
Nursing management	411	Pathophysiology	447
