Journal Citation Indicator (JCI) $_{\odot}$

0.89

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (JNCI) of citable items (articles & reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of L5 have 50% more citation impact than the average in that category. It may be used alongside other metrics to help you evaluate journals. Laam nore

± Export

The total number of times that a journal has been cited by all journals included in the database in the JCR year. Citations to journals listed in JCR are compiled annually from the JCR years combined database, regardless of which JCR delition lists the journal.

Citation distribution ₀

The Clastion Distribution shows the frequency with which items published in the year or two years prior were cited in the JCR data year (i.e., the component of the calculation of the JF). The graph has similar functionality as the JF Trend graph, including hover-over data descriptions for each data point, and an interactive legend where each be used as a toggle. You can view Articles, Reviews, or Non-Clable (other) items to the JF numerator, Lasin more

Open Access (OA) _©

The data included in this tile summarizes the items published in the journal in the JCR data year and in the previous tw of published items is used to provide descriptive analysis of the content and community of the journal. Learn more

Rank by Journal Impact Factor

Journals within a category are sorted in descending order by Journal Impact Factor (JIF) resulting in the Category Ranking below. A separate rank is shown for each category in which the journal is listed in JCR. Data for the most recent year is presented at the top of the list, with other years shown in reverse chronological order. Learn more
